

The Aeromaster WT Series Water Tank and Inoculation Units

Maintaining sufficient moisture in the windrow is essential to making good compost. An Aeromaster Water Tank and Inoculation Unit provides the windrow turner with a supply of water that can be applied to a compost windrow. The Aeromaster Units conveniently attach to the rear of a Aeromaster compost turner with an adjustable height hitch and quick attach water hose and come in two styles and a variety of water tank capacities. The easy pull, two-wheel model is available with a 1,000, 1,400, or 1,775 gallon main tank. The easy pull four-wheel trailer with four-wheel steering comes with a 3,000 gallon main water tank. All

Aeromaster WT Series models feature heavy-duty frames, large flotation tires, a four (4) horsepower Honda oil protection water pump, standard eight way valve system, and have the following optional features available:

- **Inoculation System including a 65 gallon tank, valves, and plumbing**
- **Electric valve for ON/OFF water flow control from the tractor cab**
- **Hydraulically driven water pump** (replaces standard gasoline pump engine)**

Aeromaster Two-wheel Water Trailers (left) feature cone bottom tanks for easy cleaning. The easy pull, 2-wheel trailer is highly maneuverable. The available inoculation tank provides the flexibility of adding biological inoculants to the larger water tank for application to the compost windrow.

The Aeromaster WT-3000 (right) is a large capacity, four-wheel water trailer with a 3,000 gallon main tank and an easy pull four-wheel trailer with four-wheel steering. It comes with pump, valves and plumbing and is designed for operation with an Aeromaster pull type compost turner. The available inoculation tank provides the flexibility of adding biological inoculants to the larger water tank.

**Hydraulic Pump requires a third set of hydraulic remotes with a pressure free return.
