# Advanced Composting System Workshops

For consistently high quality compost...

*Learn How To Convert Agricultural Waste Into High Value Fertilizer*

ACS Compost Workshops provide training in the best methods for converting agricultural waste and organic matter into highly effective organic fertilizer.

ACS Compost Workshops are located near compost production facilities that practice the Advanced Composting System principles. During visits to the compost site, we will demonstrate what was taught in the classroom in a **real work environment**. Our updated curriculum expands the **hands-on** time at the compost site to increase the confidence level of participants so that they can go home and produce highly effective organic compost. Compost **site demonstrations** include windrow building, compost turning, watering and microbial inoculation techniques, and the use of compost process monitoring instruments. The sessions also include production **troubleshooting** as well as the tips on increasing compost quality **without increasing the cost**.

It is the combination of classroom instruction and compost site work that make the ACS Compost Workshops an effective way for you to get started or improve your existing operations. Contact us today to enroll!

“ The MBS Workshop covered a wide range of composting topics from the nuts and bolts of how to produce high quality compost to the microbiology that drives the true value of humified compost. The workshop leaders taught with a true passion and their years of experience in the industry were reflected in their teaching. My expectations were exceeded and I could not have been more pleased. ”

*Nathan Kemper,  
Research Program Associate  
Agricultural Economics and Agribusiness  
University of Arkansas
